

The complete service
from initial consultancy
to the final movement.

MAGNALOAD LIMITED
Ferry House, Ferry Road,
Middlesbrough, TS1 1HZ, England.
Telephone 0642 40461. Telex 58594

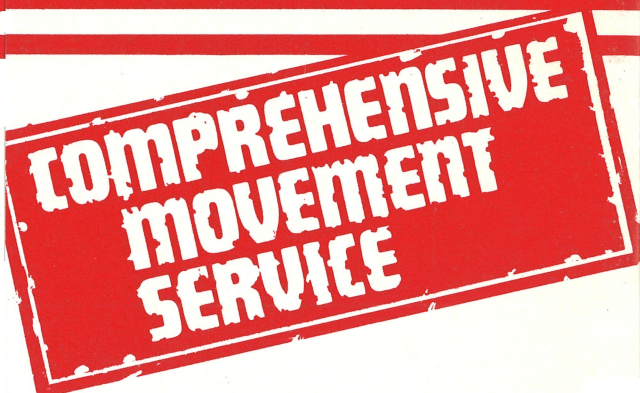

Mammoet Transport B.V. with its H.Q. at Amsterdam operates throughout Europe, the Middle East and East Africa. Three family companies, each with long and deep rooted interests in aspects of heavy load movements, craneage and rigging, united five years ago to form a powerful source of knowledge, experience and operational equipment.

The company is now widely acknowledged as one of the leading operators in the transportation of very large and heavy items.

The Peckston Group, whose H.Q. is at Middlesbrough, has served traditional shipping interests for fifty years.

Now, additionally, within the Group are companies and professionally qualified people specialising in steel fabrication and offshore engineering; project support and heavy lift services; ship/cargo surveying and consultancy; ship/craft chartering and agency; road transport, warehousing and airfreight. The Peckston Group has offices and bases at all major East Coast U.K. ports from the north of Scotland to London, and is represented at all major U.K. airports.

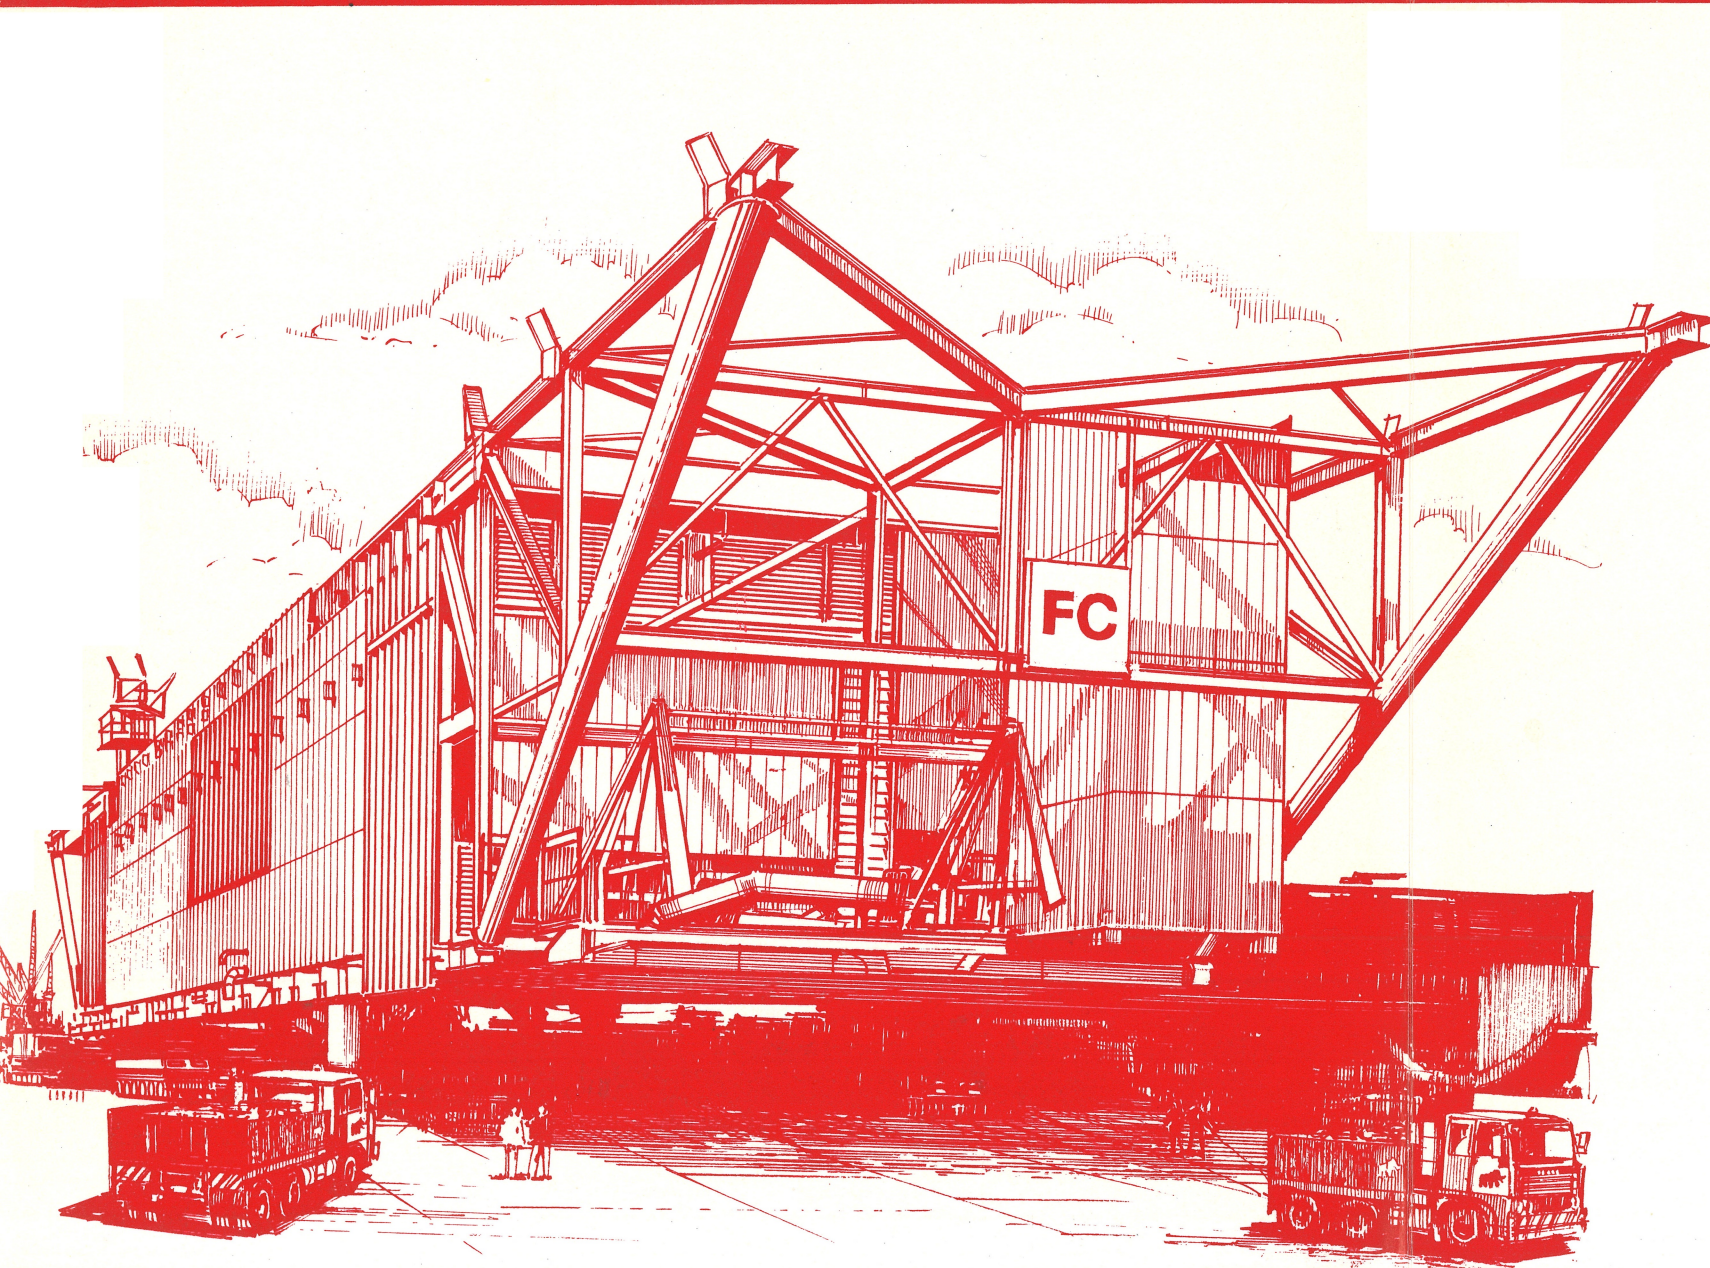

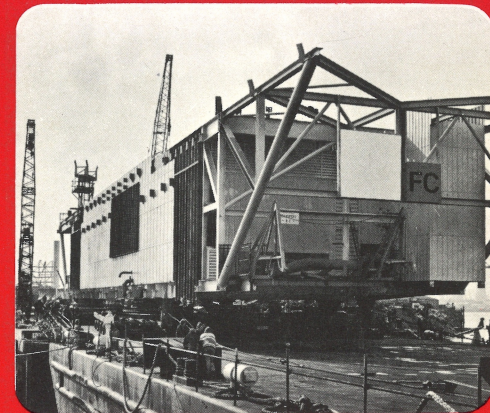

- Full consultation during construction
- Transport from works to port area
- Handling on to own/chartered ship or pontoon
- Completion of all necessary customs formalities
- Sea fastening & securing to Lloyds or Salvage Association, etc. approval
- Off-loading at destination and on-transport to site
- Final erection on site

New technology in the Offshore, Construction and Heavy Engineering Industries is producing structures of larger and larger unit size and weight. This is demanding parallel improvement in the technology of the movement of indivisible loads. Magnaload meets that demand.

You're in good company

The Peckston Group has offices and bases at all major East Coast U.K. ports from the north of Scotland to London, and is represented at all major U.K. airports.

LOAD-OUT SYSTEMS

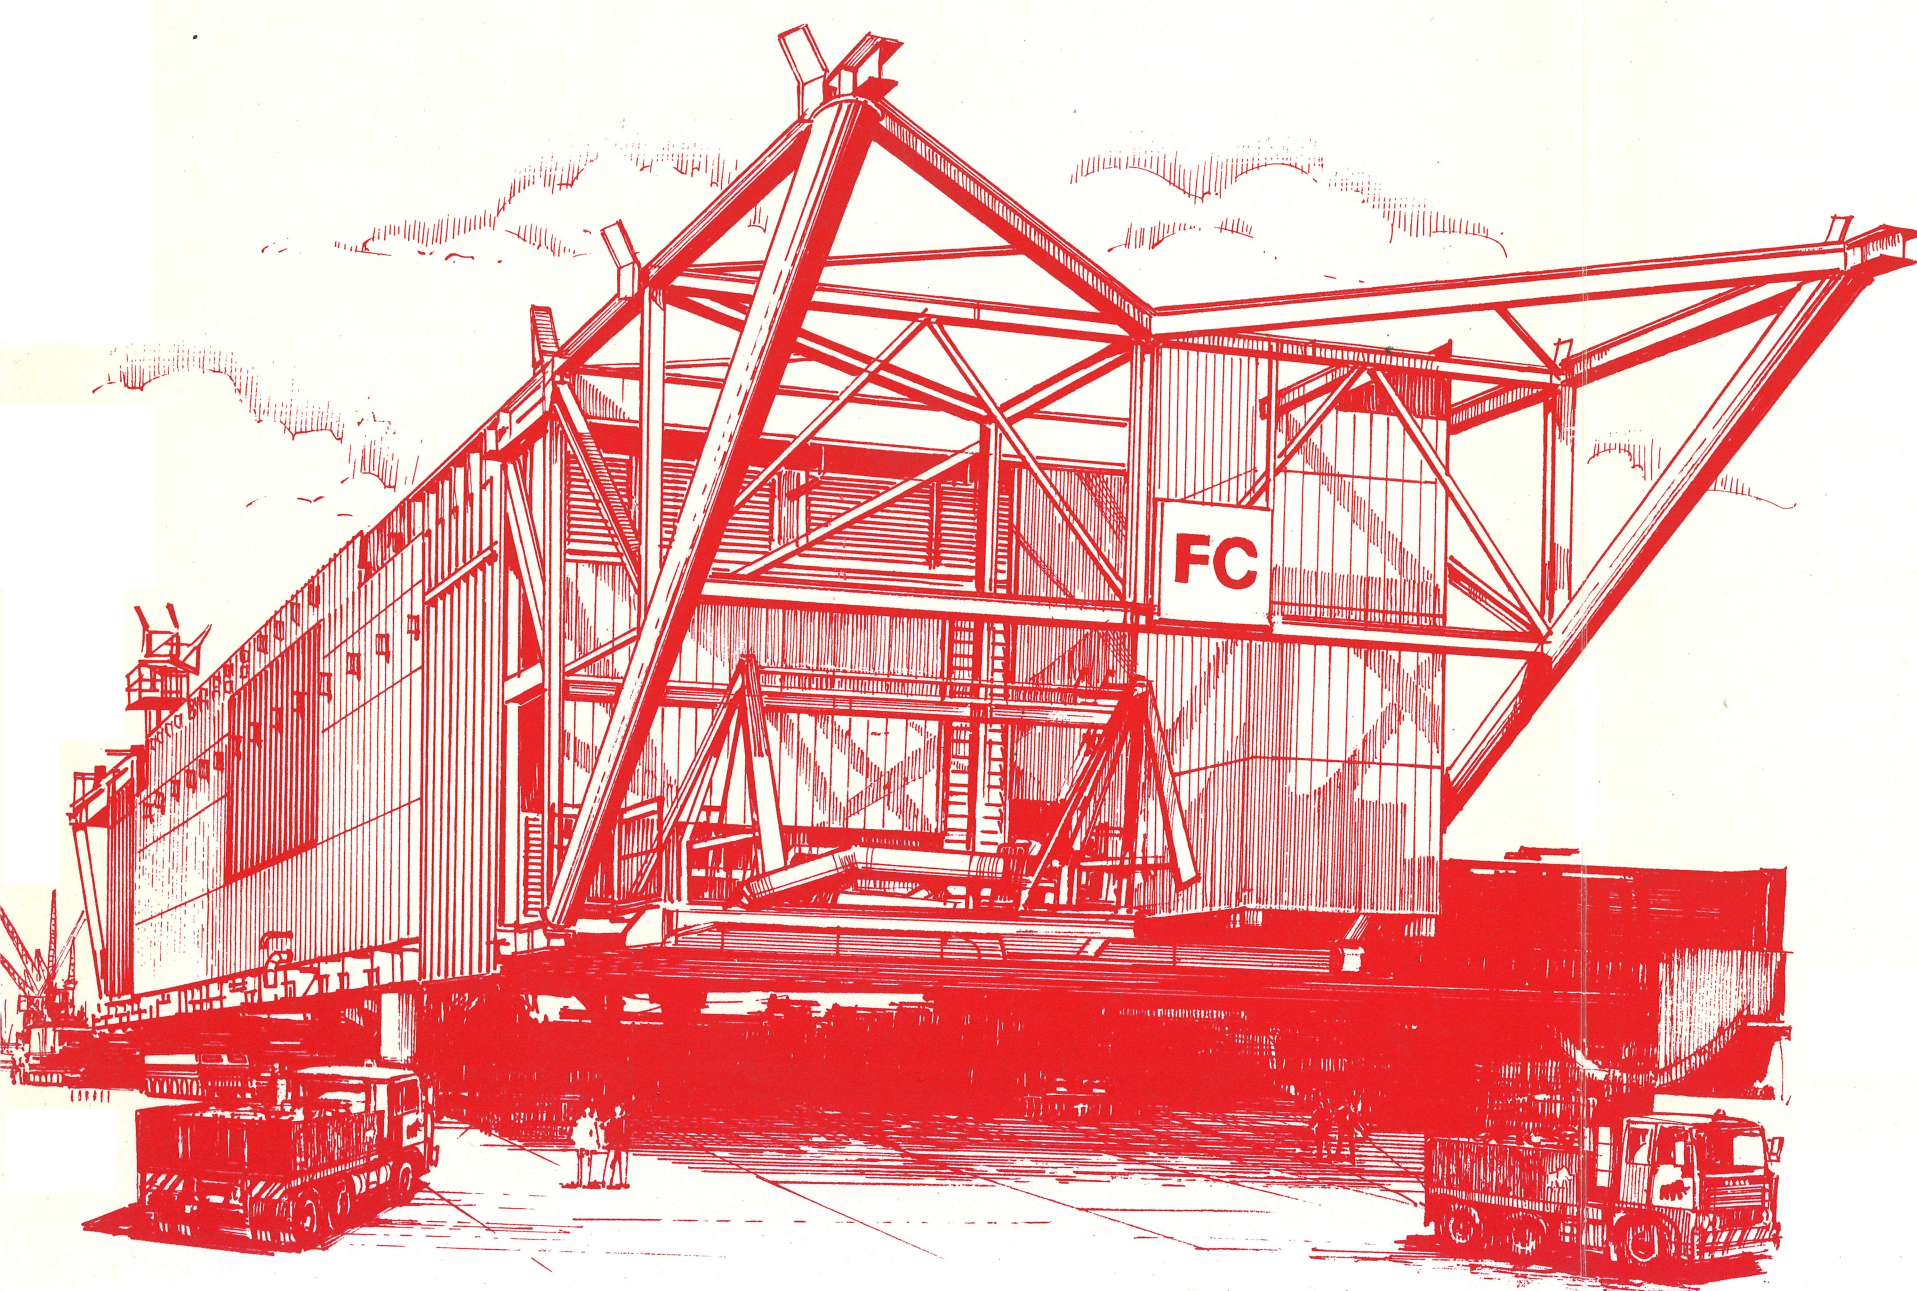

For most operations a multiwheeled trailer system is preferred.

Advantages:

- 1 Excellent load spreading characteristics which usually avoid all necessity for additional strengthening of the site, quay edge and pontoon deck.
- 2 A safe, quick and reliable system especially developed to overcome the problems associated with tidal facilities.
- 3 Rapid assembly and demobilization of equipment which means neither your site nor work force is occupied for long periods in unproductive work.
- 4 The company is also familiar with other modes of load-out operation, including the use of air and water cushion skates, skidding, and the operation of mobile and floating cranes. These systems may be offered where technically and/or economically viable.

New technology in the Offshore, Construction and Heavy Engineering Industries is producing structures of larger and larger unit size and weight. This is demanding parallel improvement in the technology of the movement of indivisible loads. Magnaload meets that demand.
